

800 units

of Dynabook S73 introduced to TKC engineers, which run on the Intel vPro® platform.

TKC Enables Hybrid Workforce with Dynabooks Powered by the Intel vPro® Platform

TKC Corporation handles corporate accounting and develops systems that support the work of certified tax accountants, accounting offices, and local governments in Japan. Engineers make up at least 40% of more than its 2,000 total employees. TKC replaced 800 engineer computers with Dynabooks. For engineers who repeatedly run high-load processing, having peak computer performance is one of the most important points for productivity. The company also prioritized finding a solution with high security features and efficient device management tools. The Dynabooks that TKC introduced come equipped with Intel® Hardware Shield and Intel® Active Management Technology as part of Intel vPro® Enterprise for Windows. TKC has implemented a streamlined technology mix that enables workers to be productive without disruption.
