“We were also pleased that ThinkAgile CP came equipped with 2nd gen Intel Xeon Scalable processors—the workload-optimized CPU platform delivers consistently high performance, ensuring that we can meet demanding service-level agreements.”

**Ossi Rajala, Sales
Manager, Prog-It**

Supporting Growth with an Agile, All-in- One Private Cloud System

As managed services provider Prog-It’s client base increased, so did the complexity of its hosting infrastructure. Prog-It decided to consolidate the company’s three data centers into a unified platform from a single provider to simplify system management and enhance its services to keep up with its clients’ evolving needs. Prog-It selected Lenovo’s composable private cloud system ThinkAgile CP. Equipped with 2nd gen Intel® Xeon® Scalable processors, ThinkAgile CP enables administrators to dynamically allocate virtualized compute, storage and networking resources to provision private cloud services with ease. Since moving to the Lenovo ThinkAgile CP platform, Prog-It has significantly reduced the size and complexity of its infrastructure, simplifying administration and cutting costs.
