

AT&T Accelerates Network Transformation on the Path to 5G

AT&T is collaborating with Intel to stay ahead of surging demand for data capacity, rapidly add new services and ready its network for 5G. Early access to new technology lets AT&T meet rising network data demands. AT&T is using Intel® Xeon® Scalable processors in their network and have seen packet processing improve dramatically in addition to seeing benefits with enhanced core count and virtualization and data plane capabilities. AT&T's relationship with Intel lets AT&T build, fine-tune and accelerate time to market with its software-centric, cloudified solutions, like AT&T's FlexWare.
